Homework 10 (Due: 5/29)

(A) (i) Apply wavelet transform to the following data sequence [71 67 24 26 36 32 14 18] using average ($s = (a + b) / 2$) as the low pass filtering and difference ($d = a – s$) as the high pass filtering.

(ii) Recover the input sequence from the result of wavelet transform in (i).

(B) Repeat (A) for the following data sequence [18 14 32 36 26 24 67 71]
